

Communication System

Utilizing the Galaxy software platform, the LT Series system is an advanced, small scale paging and intercom solution. The Galaxy LT system features are delivered on a small form factor PC – making it easy to install, program, use, and manage. The LT system is built on industry standard computers and runs on Microsoft Windows.

LT systems are modular in design ranging in size from 16 to 64 speaker stations. The intuitive user interface of LT allows site based management for most system changes including adding zones, uploading and distribution of on the fly live paging, or changing scheduled announcement and event schedules.

-5 allows users to perform two-way intercom communication to individual rooms. This flexibility also extends to event scheduling. The specific zoning of announcements or event schedules can be easily programmed to direct communications to specific locations that need to receive an announcement.

Technicians have the ability to view system logs, events, and have immediate diagnostic capabilities.

IT staff can upload and play audio files from virtually any source. This flexible technology provides the ability to make general announcements, emergency pages, or give weather warnings.

No maintenance or subscription fees are required for this service.

The LT allows up to 999 manual audio file play back that can be imported, or created, WAV or MP3 files. This is ideal for emergencies where a calm voice or a special keyword needs to be relayed to the staff. Once set up, it is as simple as dialing a number or the press of a button to play any tone through the system. The user can use a school “Fight Song” as a timed event schedule for pep rallies or to dismiss class for the day. The possibilities are limited only by your imagination.

Galaxy LT

The Galaxy LT system comes standard with the ability to communicate via dry contact closure with other special systems such as lighting, and security.

FEATURES:

Modular Design for expansion Accommodates
both IP and Analog phones Built in Master Clock
Software
Easy to use Graphical User Interface
LT uses industry standard 25 / 70 volt technology
for easy retrofit situations
Hands free operation 2-Way Communication
from any classroom

Equipment mounted in space saving wall unit
with lockable glass door
Up to 64 Paging Zones
Unlimited Schedules
Accepts user.Wav or .mp3 files for custom tones
Unlimited pre-recorded messages or tones
Repeating schedule programming
Unlimited user defined schedules
Multi-year programming
